+ TURKEY R.O.P. SUMMARY,
1952 and 1953

This summary includes the records of candidate flocks maintained in accordance with the provisions of the U. S. Record of Performance stage of the National Turkey Improvement Plan. These records are published to give official recognition to the performance of the birds entered in U.S.R.O.P. and to provide a means of evaluating the flocks as sources of breeding stock. The records for the years 1952 and 1953 are included so that a more accurate appraisal may be made than is possible when only one year's records are considered.

The following information is given for each flock under U.S.R.O.P. supervision during 1952 and 1953:

- (a) Year records were compiled.
- (b) Total number of young hens of a particular variety on the farm.
- (c) Number of U.S.R.O.P. candidate matings.
- (d) Number of young hens entered in U.S.R.O.P.
- (e) Number of young hens meeting the U.S.R.O.P. requirements.
- (f) Percentage of young hens entered meeting the U.S.R.O.P. requirements.
- (g) Average rate of (percentage) egg production of all candidate hens.
- (h) Average body weight of all the candidate hens.
- (i) Average hatchability of all eggs set from all the candidate hens.
- (j) Pullorum Class - indicated by the abbreviation PCd - U. S. Pullorum-Controlled; PP - U. S. Pullorum-Passed; PC - U. S. Pullorum-Clean.
